

Supporting Request Guide

How operational support moves from request to completion

When to use this request

Use Supporting for operational work outside a system feature or project, such as a presentation, printer issue, account problem, or network check.

Request-to-delivery flow

1	Describe the support needed Explain the expected result and include the relevant device, file, account, or location.	You
2	ITD triage ITD reviews the request, confirms its priority, and assigns the right team member.	ITD
3	Support in progress The assignee works on the request and keeps its status up to date.	ITD
4	Completed The completed request remains available in your request history.	ITD

Before you submit

- Use Supporting only when the work does not change a system or require a new project.
- Include device names, room locations, file formats, or account names when relevant.
- Choose a realistic needed-by date and use high priority only for real operational impact.
- Describe the expected result so ITD knows when the request is complete.

Where to follow progress

Monitor assignment, status, and completion from My requests under the Supporting tab.
